

TIBCO® Managed File Transfer Suite

# TIBCO® Managed File Transfer Suite

TIBCO Managed File Transfer Solution connect people, processes and information, thereby promoting and strengthening the value chain among your partners, customers, and employees – both inside and outside of the enterprise.

## Industrial-Strength MFT for the Global Enterprise

Advanced managed file transfer (MFT) is an imperative for any organization with information at its core. Whether it's transferring materials within the walls of your enterprise or outside of it, TIBCO offers the fastest, most economical solution for electronic delivery of large files to anyone, anywhere – regardless of platform.

.....  
The following solutions save time and money by automating everyday data transfer tasks and easily integrating into your multi-platform network:

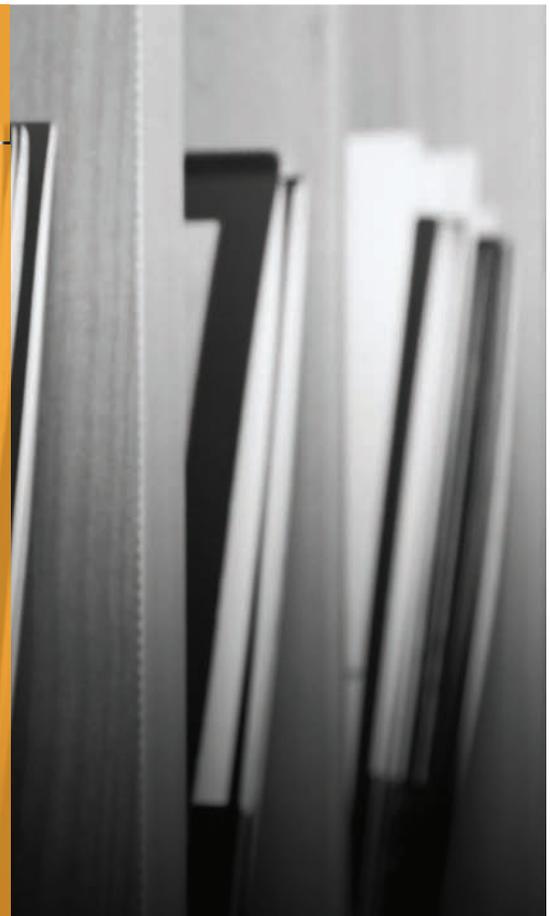

- **TIBCO MFT Command Center** provides a single point of control from which to manage all file transfers, both inside and outside the enterprise, and across all platforms.
- **TIBCO MFT Platform Server** is the workhorse within MFT and its core strength is multi-platform file transfers. The solution supports all platforms from Windows to the Mainframe and provides total security and control for every file entering or leaving the enterprise.
- **TIBCO MFT Internet Server** enables organizations to securely, efficiently, and economically exchange information with complete control through a web service or as a stand-alone application.

### Key Drivers

The acceleration of market globalization, major advances in technology and increased levels of security risk have all contributed to the criticality of advanced MFT. In fact, advanced MFT has become a linchpin to corporate data and application integration strategies.

Enterprises around the world are turning to TIBCO to help combat many file-transfer issues, including:

- Integration Requirements
- Regulatory Compliance Mandates
- Control & Management
- Security
- Open Standards
- Efficiency

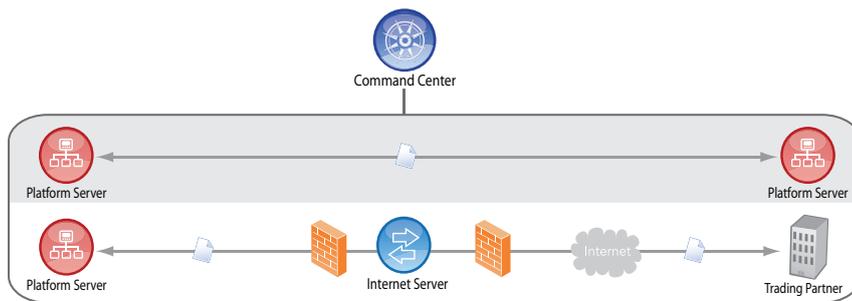

# TIBCO® MANAGED FILE TRANSFER COMMAND CENTER

*Single Point of Control for All Enterprise File Transfer*

Command Center provides a single point of control to manage all of your enterprise file transfers, whether it be internal transfers across the extended enterprise, or external transfers with customers, suppliers and business partners (B2B).

Serving as the digital dashboard, administrators can use a standard web browser to review and control all file transfer activity across all major open platforms (from Windows to the Mainframe).

## Complete Audit and Compliance: Keeping a Pulse on Enterprise File Transfer

In a typical business environment, file transfer activity is happening 24x7. Many times, it includes high volume file transfers, very large files, and users and systems spread across a broad geographic area. Command Center gives your organization centralized access to logs of each and every transfer-related event at the local and central level, and produces detailed reports of every aspect of those transfers. Real-time alerts can notify your personnel instantaneously as circumstances warrant so that issues can be resolved quickly.

In addition to a standard set of detailed audit reports, delegated administration and an extensive set of online inquiry tools support ongoing operational and management needs. Having these tools centrally available at all times enables your organization to achieve total control of enterprise file transfer, while maximizing efficiencies and helping satisfy compliance mandates.

## TIBCO® MFT

MFT connects people, processes and information, thereby promoting and strengthening the value chain among your partners, customers, and employees – both inside and outside of the enterprise.

### Other Key Benefits:

#### Enterprise Application Integration

*(Platform Server only)*

An open architecture allows seamless integration with enterprise applications. The solution's full set of open APIs, ActiveX controls, ISPF panels, and REXX and command line interfaces can be accessed easily, enabling users to program directly into enterprise applications.

#### High Availability

*Clustering (Platform Server only)*

Supports clustering for failover support and reliability

#### Guaranteed Delivery

Checkpoint Restart and other mechanisms provide guaranteed delivery and detect if a connection drops. Checkpoint Restart resumes the transfer at the exact point it dropped and continues until completed – no manual intervention is required.

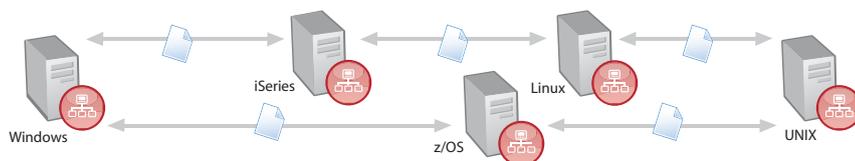

#### No File-Size Limits

Differs from virtually every other file-transfer solution because it has no file-size limitations, and can handle the transfer of very large files at the highest volumes.

#### Efficiency

Maximizes enterprise efficiency with end-to-end processing, transfer scheduling, and event-driven transfers.

## TIBCO® MANAGED FILE TRANSFER PLATFORM SERVER

- **Up to 200 Times Faster, Across All Major Open Platforms:** Accelerated by TIBCO RocketStream® technology, Platform Server executes file transfers up to 200 times faster than FTP and other legacy systems. The workhorse at the heart of MFT, Platform Server provides the foundation for secure, controlled file transfers at the highest volumes and across all major open platforms.
- **Maximized Security at Every Stage of the Process:** With a full range of built-in security and authentication options, no file enters or leaves without the server knowing about it and approving the transmission.
- **End-to-End Automation, Integration, and Efficiency:** Security is a key feature of Platform Server. However, it can do much more than protect data; it can be used to completely automate the process of sending and receiving files. Powerful scheduling options and event-driven capabilities enable lights-out automation of all file transfer processes – 24 hours a day, regardless of location.

### Key Features:

- **Security**  
Complete data security and support for the world's most stringent encryption standards.
- **High Availability/Clustering**  
Supports clustering for failover support and reliability.
- **Real-Time Alerts**  
Send messages and alerts by phone, e-mail, or mobile device.

## TIBCO® MFT

Advanced managed file transfer (MFT) is an imperative for any organization with information at its core.

Whether it's transferring materials within the walls of your enterprise or outside of it, TIBCO offers the fastest, most economical solution for electronic delivery of large files to anyone, anywhere – regardless of platform.

### Cost Savings

By promoting process automation and efficiency gains throughout your enterprise, your organization can achieve substantial reductions in operating costs.

### Easy-to-Use

Because Internet Server is browser-based, users can get up-and-running quickly with little or no technical expertise.

### No "Store and Forward"

*(Internet Server only)*

Strong proxying capabilities ensure that incoming data is delivered directly to the back-end system and never stored in the DMZ.

# TIBCO® MANAGED FILE TRANSFER INTERNET SERVER

Business Partners

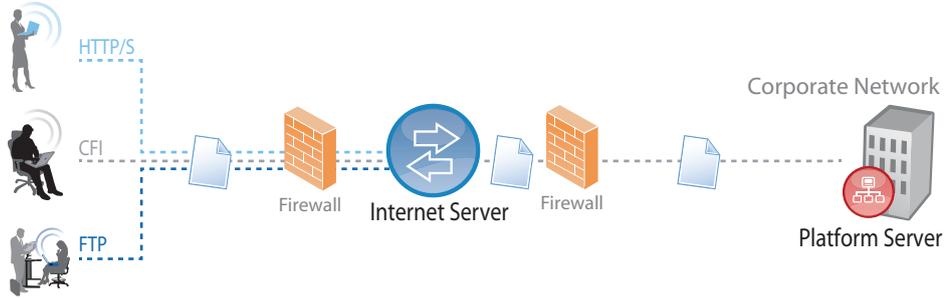

Fig. 1 Internet Server can be deployed in the DMZ or inside "the edge" of the corporate network. In this depiction, Internet Server is deployed inside the corporate network with the optional Edge Server deployed in the DMZ.

Command Center provides a single point of control to manage all of your enterprise file transfers, whether it be internal transfers across the extended enterprise, or external transfers with customers, suppliers and business partners (B2B).

Serving as the digital dashboard, administrators can use a standard web browser to review and control all file-transfer activity across all major open platforms (from Windows to the Mainframe).

## Key Benefits:

- Up to 200 Times Faster, Across All Major Open Platforms
- No data is ever written or stored in the DMZ
- No authentication credentials are exposed in the DMZ
- Works with all major file transfer protocols (HTTPS, HTTP, FTPS, SFTP, FTP, AS2, SSH, CFI)
- Hardened Linux OS offers security
- Plug-and-play functionality
- Support for multiple DMZ environments
- Easy-to-use, browser-based configuration manager

**TIBCO Software Inc. (NASDAQ: TIBX)** is a provider of infrastructure software for companies to use on premise or as part of cloud computing environments. Whether it's efficient claims or trade processing, cross-selling products based on real-time customer behavior, or averting a crisis before it happens, TIBCO provides companies the two-second advantage™ – the ability to capture the right information, at the right time, and act on it preemptively for a competitive advantage. More than 4,000 customers worldwide rely on TIBCO to manage information, decisions, processes, and applications in real time. Learn more at [www.tibco.com](http://www.tibco.com).
